

Q25 Topics that a competent ER practitioner would cover with a patient in post-ER conversation

Answered: 12 Skipped: 0

#	RESPONSES	DATE
1	-Signs/symptoms of potential serious adverse events including pain, bleeding, fever/chills, N/V - Importance not to travel to remote areas for minimum 14 days -Review dietary restrictions - Review medication plan - when to start antiplatelet agents, ? antibiotics, etc. -Importance of appropriate follow-up -Screening of family members	11/13/2018 6:40 AM
2	Patient should return in case of continued or severe blood loss, fever or new onset abdominal pain.	12/7/2017 5:48 PM
3	- Completion or not of the procedure - Risk of delayed complications - Need for surveillance - Plans for discussion of histology from the ER - Potential scenarios that might occur depending on the histology report	12/3/2017 9:54 PM
4	* radical resection * details on location, size etc * chance that lesion in the end appears invasive * risk of late bleeding and perforation and what to do in case of emergency	11/18/2017 9:37 PM
5	Significant pain or rectal bleeding, T>38, fevers/chills	11/14/2017 6:08 AM
6	1. Discussion about expected pathology result based on endoscopic appearance 2. Explanation about post procedural diet 3. Explanation about what complications could still occur (bleeding, serositis, delayed perforation) and when to seek medical attention 4. Followup plan to discuss pathology results and potential outcomes 5. Need for interval colonoscopy based on size and histology (either 6 or 18 months)	11/13/2017 1:44 PM
7	Address any symptoms that the patient may be experiencing such as pain post procedure Address plan for resumption of anti-platelet or anticoagulants Discuss plans for surveillance endoscopy.	11/5/2017 3:14 PM
8	1. Size, location of lesion 2. Whether ER was successful and any difficulties encountered 3. What to expect post discharge including occasionally minimal rectal bleeding 4. Contact number if any concerns 5. Follow up appointment to discuss pathology and further follow up	11/5/2017 3:26 AM
9	- success of the procedure in terms of completeness of resection, R0, absence/presence of signs of SMIC, possible recurrence - adverse events and attitude toward them - follow up	11/3/2017 3:11 PM
10	emergency contact arrangements symptoms of severe complication symptoms likely after the procedure that are minor and not concerning follow up arrangements findings at endoscopy	11/3/2017 12:46 PM
11	Endoscopic diagnosis, endoscopic radicality, incidents during the procedure, possible complications and what to do when present, time until final pathology result, make sure an appointment is arranged before leaving the hospital	11/1/2017 11:43 AM
12	Finding and result of interventional procedure. If there is a concern about potential malignancy and the need for further investigations. Expected symptoms and course over next 48 hours (discomfort, nausea and vomiting, potential bleeding). What to do if pain develops or worsens or there is uncontrolled bleeding/patient unwell. Potential for late bleeding and how to address this. Follow up arrangements for pathology and repeat procedures.	10/31/2017 11:04 PM
