

Q32 After endoscopic resection, please list the features of a successful surveillance colonoscopy that a competent ER practitioner would perform and document.

Answered: 12 Skipped: 0

#	RESPONSES	DATE
1	-Careful and systematic assessment of the scar using both high-definition white light followed by optical enhancement (NBI, Pentax OE, FICE) -Targeted biopsies followed by thermal destruction of any potentially concerning tissue recognized by a transition in pit pattern	1/13/2018 7:07 AM
2	No residual adenoma present. Identify the scar	12/7/2017 5:53 PM
3	- Assessment of scar in detail with chromo (virtual and or dye) and if necessary magnification - Noting any metachronous lesions and removal as appropriate - Detailed video and photo documentation	12/3/2017 10:05 PM
4	Good prep Complete to ileum/caecum Scar assessment w HDWL + NBI Normal vs recurrence Biopsy/resection if residual Surveillance interval	11/29/2017 12:34 AM
5	* completeness * all other quality indicators * resection-site detected and closely inspected? * with HR-WLE as well as (digital) chromo?	11/18/2017 9:43 PM
6	Identification of the EMR scar Assessment of the scar with WLE and NBI Multiple biopsies from scar for histology documentation of no residual Documentation of next follow-up interval	11/13/2017 2:06 PM
7	Surveillance colonoscopy should assess for residual adenoma and use of advanced imaging techniques (optical or regular chromoendoscopy) Assess the scar of previous resection	11/5/2017 4:15 PM
8	1. Document size of scar and if any evidence and size of residual adenoma 2. Ensure no synchronous lesions present	11/5/2017 3:48 AM
9	identification of the scar thorough inspection with NBI or chromo obtention of biopsies in case of doubt Remobal + Ablation of the residual tissue photodocumentation Location	11/3/2017 3:15 PM
10	scar identification tattoo noted in relation to scar. recurrence understanding clip artefact	11/3/2017 2:01 PM
11	High bowel prep score, complete colonoscopy, recognition of scar and extensive imaging with HD, NBI/BLI, nearfocus/magnification. Biopsies and treatment when in doubt	11/1/2017 12:01 PM
12	Inspection and location of scar with photo evidence. Description of any recurrence and subsequent therapy. Presence of any other polyps.	10/31/2017 11:14 PM
